Introduction

BSJME features

BSJME is a web application that enables the Bureau of Standards Jamaica to identify, monitor and evaluate the MSMEs that could benefit from the various interventions of the Bureau. The system groups the information and interventions made by the consultants of BSJ. The various actors can more easily follow all clients as well as their needs. They find in the same place all documents and information.

Report Flexibility

BSJME supports the generation of reports and responses to queries. Among the reports and responses it can provide users are: List of clients (with interventions, performance, inquiry and documents) and other reports required.

Deployment Versatility

BSJME is practical and usable by any users. It can run in stand-alone mode, in a local area network (LAN) environment or directly on the Web. It can also be hosted on the BSJ own network and shielded with a firewall and other security measures, or on a dedicated server of an outside party.

Multi-Module System

The BSJME opens up and expands BSJ's capability in the administration of interventions in different key areas:

Client

- All the information about the client is at the same place
- Consultants can view and add all the information about interventions and performance of their clients.
- Client search is possible on different criteria
- Many reports can be asked
- Consultants can give different rating to a client
- All documents related to the client can be uploaded and downloaded

Interventions

- Searching a specific intervention is easy
- An intervention have a specific type, status and phase which makes it easier to group the information
- Can follow-up the interventions that will end for a specific range of dates
- Documents on the intervention, association, clients' activities and environment can be attached to the intervention and are also available on the client form.

User Friendliness

Although user friendliness is very subjective, the system is designed to minimize user intervention, meaning, it takes less time to accomplish a particular task. Fields are appropriately labeled which make the screens intuitive and easy to learn. The system is available in English or French.

Integrity of the database

Required fields are indicated by a red asterisk. Error messages and confirmations are presented properly and are easy to understand. Inputs are validated prior to being passed to the next step, which prevents incorrect processing of data. To ensure the integrity of the database, some data from the setting tables can be active or inactive.

Concept of operation

To ensure the smooth operation of the system, it is best that a system administrator (SA) be designated first to oversee the overall implementation and operation of the system. Once this person has been assigned, the application may be installed. After installing the system, the next step is the creation of user accounts by the SA. As part of system security, only authorized users are given access to the system. As such, before any other user can enter the system, the administrator must first create an account, specifying the username, password, email, phone, gender, and language preference and access rights. Access rights refer to permissions given to a particular type of user that said user can have access to.

Once the user accounts have been created by the SA, authorized users may now start using the system. However, in order for the system to operate properly, the different system settings have to be set first. Follow the sequence described in this manual since there is a hierarchy in the setup of system settings. After these have been defined properly, clients and interventions can be created.

Getting around

The screenshot shows the BSJME system interface. The left sidebar contains the Main Menu with options: Dashboard, News, Clients, Interventions, Reports, Settings, Documentation, Reportico, and Logout. The main content area is titled 'Clients' and includes an 'Add Client' button. Below this is a table of client entries. Callouts point to various features: 'Entries to show' points to the 'Show 10 entries' dropdown; 'Sorting column' points to the column headers; 'Display area' points to the table content; 'Specific Search' points to the search bar; 'Actions' points to the action icons; 'Back to Home' points to the top right navigation; and 'Main Menu' points to the sidebar. The footer shows 'BSJME version' and 'Version 1.0'.

BSJME version

Version 1.0

Main Menu – Serves as the main access point for the system’s main modules.

Display area – Pages of modules accessed through the Main Menu are displayed in this area.

BSJME version – Is the current version of the software.

Entries to show – The number of entries to display before changing pages.

Specific Search – Search on the data’s showed on the page

Column sorting - Each column can be sorted in ascending and descending order.

Actions – Used for quick access to a process for the line: View Edit Delete Print

Getting started

Implementation Action Plan

A. Pre-installation activities

1. Verify availability of server: if local approach is the target you need a server, if web option you need a hosting service.
2. Verify availability of workstations for the users
3. Verify availability of Local area networking if it's the avenue chosen
4. Draft the Memo for the BSJME Task Force Unit. Define members, duties and responsibilities
5. Putting it all together, schedule the following :
 - Orientation of Task Force Unit;
 - Installation;
 - Re-echo training for BSJME users
 - period of build-up.
 - acquisition of ICT resources;
6. With the Task Force Unit define the following :
 - Decide if each user of the system will have only one username or if each users can have multiple usernames depending on the various functions of the user.
 - Determine who will draft the lists of the settings needed in the system (Parish, Phase, Types etc...)
 - Group the different excel sheet that might be used for a conversion in the new system
 - Prepare test data to be used for testing your installed system.

B. Installation activities System only

1. Backup any database you have in the server
2. Store backup files in an external storage/device
3. Install BSJME database and system on the host server
4. Configuration of BSJME system settings
5. Run the browser from the workstations and access BSJME.

C. Database build-up activities

1. Build-up of System tables for Location (County – Parish – City)
2. Build-up of System tables for Client (Step, Sector, Consultant, Inquiry type, Support Type)
3. Build-up of System tables for Intervention (Target, Status, Phase)
4. Build-up of Clients and documents related to the client
5. Build-up of Interventions and documents on sector, environment, activities etc..
6. Use sample data to test and verify if system data are configured correctly as a result of the print-out documents from your system.

D. Advocacy – information dissemination

1. Provide information to the personnel regarding the implications of the computerization of the client and interventions.
2. Provide information to public regarding possible implications of your computerization of the client and interventions.

E. Re-echo of user's training activities

1. Prepare training resources (sample data, servers, and computers)
2. Conduct training
3. Test and evaluate trainees

F. System Implementation

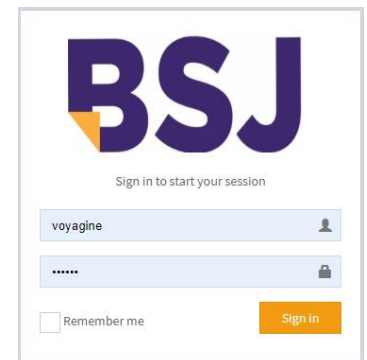

From your observations and experiences with testing and using sample data, improve and perfect the system data vs Reference-General Settings. These should be configured correctly as shown by the print-outs from your system.

G. System monitoring

1. Monitor and Report system usage
2. Monitor and Report problems encountered

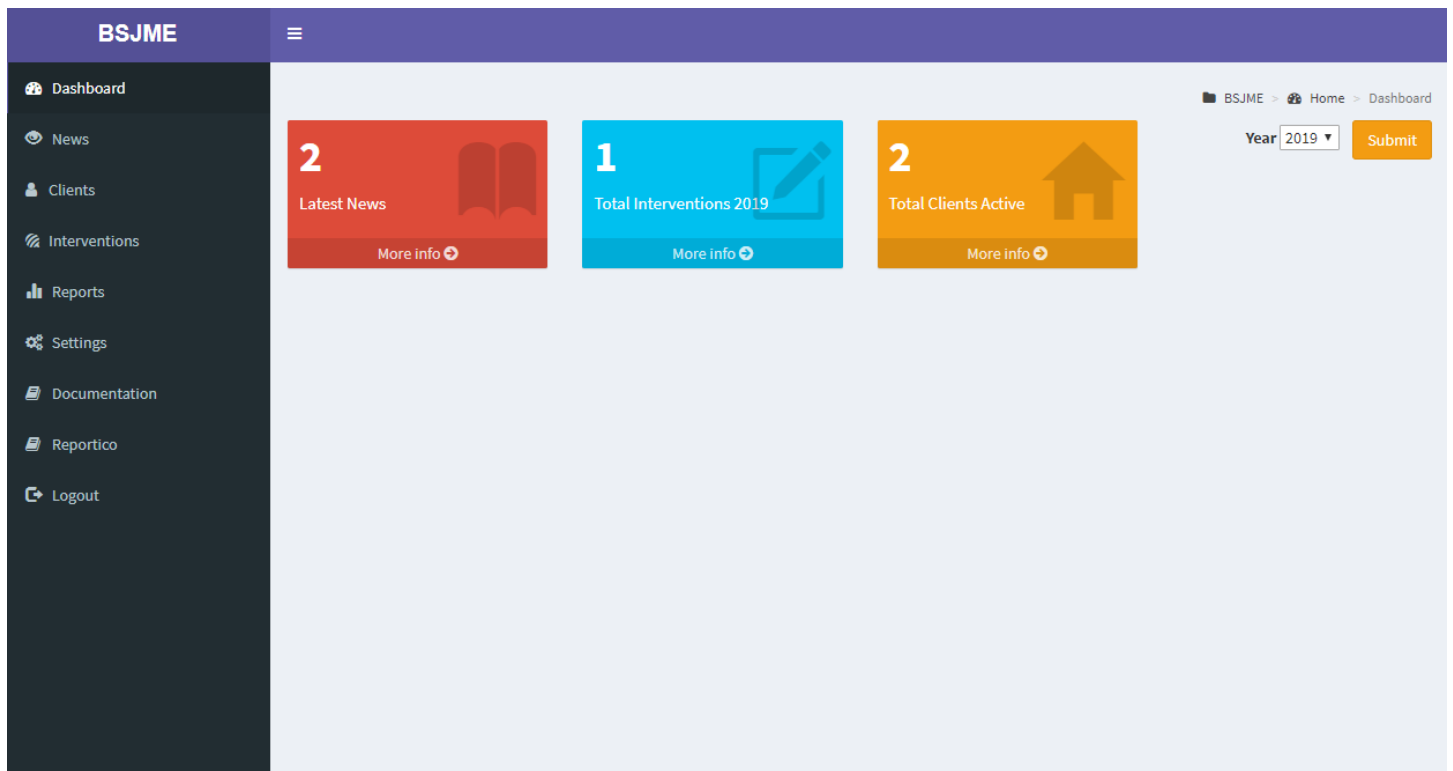

Login

To access BSJME, you need to identify yourself. The IT administrator will give you the username and password needed for your access.

The login form features the BSJ logo at the top. Below it, the text 'Sign in to start your session' is displayed. There are two input fields: the first is labeled 'voyagine' and the second is for a password, indicated by dots. To the right of the password field is a lock icon. Below the password field is a checkbox labeled 'Remember me'. A yellow 'Sign in' button is located at the bottom right of the form.

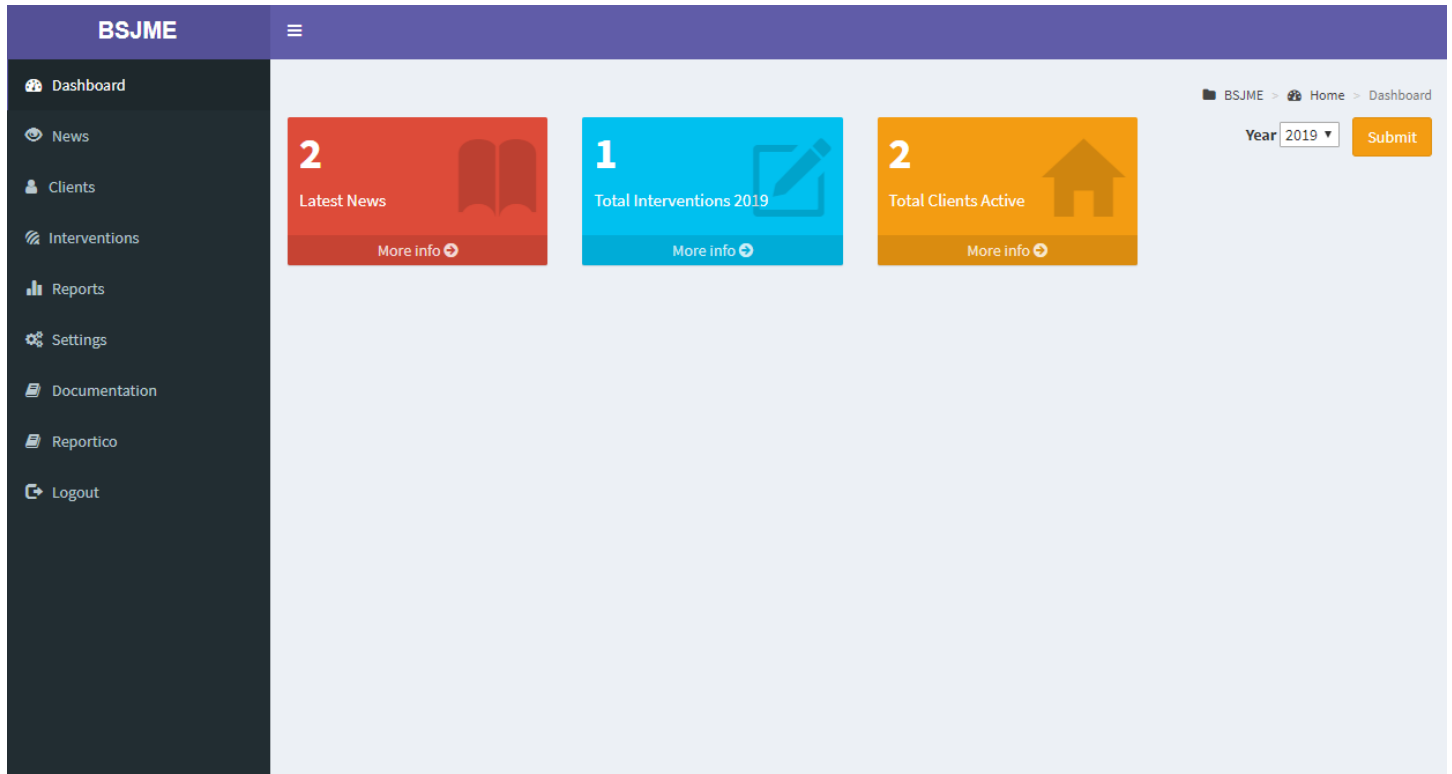

At the opening of BSJME you will have access to the modules allowed. You will also be informed about the current version of BSJME.

The dashboard has a dark blue header with the 'BSJME' logo and a hamburger menu icon. A dark blue sidebar on the left contains a list of modules: Dashboard, News, Clients, Interventions, Reports, Settings, Documentation, Reportico, and Logout. The main content area has a light blue background. At the top right of the main area, there is a breadcrumb trail 'BSJME > Home > Dashboard', a 'Year' dropdown menu set to '2019', and a yellow 'Submit' button. Below the header, there are three large colored cards: a red card for 'Latest News' with the number '2', a blue card for 'Total Interventions 2019' with the number '1', and an orange card for 'Total Clients Active' with the number '2'. Each card has a 'More info' link with a circular arrow icon. The footer contains the text 'Copyright © 2019. All rights reserved.' on the left and 'Version 1.0' on the right.

BSJME Dashboard

By opening the BSJME dashboard, you will have an overview of the progress of monitoring for the current year. You will also see if some news have been posted on the system. More facilities might be developed in the future in the Dashboard.

From the **News** menu, you will read the latest news posted by the users of the system. From the **Clients** menu on the left, you will get the list of clients. From **Interventions**, you will have the list of interventions. In the **Reports** section, you will have all the reports on clients and interventions. In **Settings**, you will find all the tables that feed the system. And finally, the system **documentation** with the user guide. **Reportico** is a flexible web reporting tool that can report on data from a variety of tables. Depending on your security level, some menus may not appear on the screen.

News

News is the list of the posts written by the BSJME users.

To add a new Performance line, press the **Add Performance** button. For editing a Performance, select the line you wish to **edit**. Fill in the required data and press the **save** command. You will get a confirmation. If the data is not consistent, the system will generate error messages. To delete a performance, select the entry in the row and press the **Delete** command.

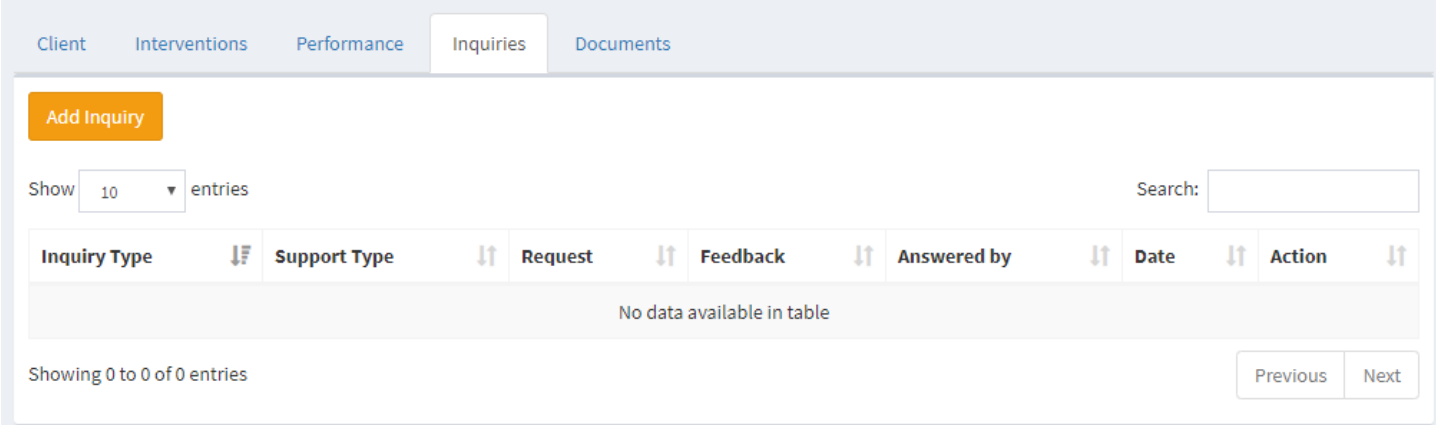

The 'Add Performance' modal form contains the following fields:

- Year ***: A text input field.
- Standard Number**: A text input field.
- Total Performance**: A text input field.
- Performance Date ***: A date input field with the placeholder 'yyyy-mm-dd'.

At the bottom right, there are two buttons: 'Close' (grey) and 'Save' (orange).

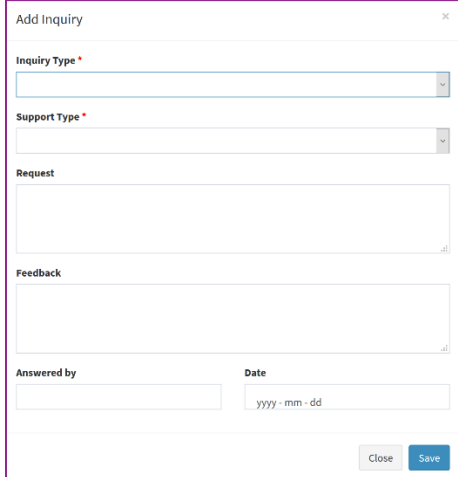

Inquiries

Inquiry is the list of all inquiries coming from the client. This will serve as a knowledge basis.

The 'Inquiries' interface includes a top navigation bar with tabs: Client, Interventions, Performance, **Inquiries**, and Documents. Below the tabs is an 'Add Inquiry' button (orange). A 'Show 10 entries' dropdown is on the left, and a 'Search:' input field is on the right. The main area contains a table with the following columns: Inquiry Type, Support Type, Request, Feedback, Answered by, Date, and Action. Each column has a sort icon. The table is currently empty, displaying 'No data available in table'. At the bottom left, it says 'Showing 0 to 0 of 0 entries'. At the bottom right, there are 'Previous' and 'Next' buttons.

To add a new inquiry line, press the **Add Inquiry** button. For editing a inquiry, select the line you wish to **edit**. Fill in the required data and press the **save** command. You will get a confirmation. If the data is not consistent, the system will generate error messages. To delete an inquiry, select the entry in the row and press the **Delete** command

The 'Add Inquiry' modal form contains the following fields:

- Inquiry Type ***: A dropdown menu.
- Support Type ***: A dropdown menu.
- Request**: A large text area.
- Feedback**: A large text area.
- Answered by**: A text input field.
- Date**: A date input field with the placeholder 'yyyy-mm-dd'.

At the bottom right, there are two buttons: 'Close' (grey) and 'Save' (blue).

Document

In the document tab, you will find all the documents related to the client and attached to a specific intervention. In the client document tab, you will be able to upload only the document to be attached to the client. All the documents in relation with an intervention, should be uploaded in the intervention module.

To upload a document, you must first choose the file and then press the Add Document button. To view the document, you press the button . Depending on the format of the document, your browser will open different windows. If the format is JPG or PDF, another tab will be opened in your browser and you will see the document immediately. If it's a Word, Excel or PowerPoint, it will be uploaded to be opened with Office.

Map

It will be possible to locate the exact location of the intervention.

How to embed a map in google Map

To get a free access to a google map you can embed a map in your site. The method is very simple. Go to Google map and find the site you wish to show in a map.

Press share and choose **embed a map**.

Copy the **html** part in the map field of the intervention and save.

The screenshot shows the Google Maps interface for Kingston, Jamaica. The 'Share' dialog is open, and the 'Embed a map' tab is selected. The dialog displays an iframe code snippet that can be copied and pasted into a website. The code is: `<iframe src="https://www.google.com/maps/embed?pb=!1m18!1m12!1s...">`. The 'COPY HTML' button is visible next to the code. The background map shows the city of Kingston, Jamaica, with various landmarks and streets labeled.

Reports

BSJME can generate reports. It is highly recommended that the machine or workstation on which BSJME is running should have a pre-installed Acrobat Reader. From the PDF viewer, users can print the report to any printer that has been pre-configured/installed in the workstation/machine.

All reports require parameters to be inputted or selected before the report can be generated. The system will tell you if the parameters is required. These parameters will be different from one report to another.

Settings

The Settings module is where basic information and necessary data are defined. The overall behavior of BSJME in the processing of **Clients** and **Interventions** printout depends on how these settings are setup. Build-up of Location, Client and Interventions for the system is defined here as well. The **System Administrator** is the one in-charge of setting up these settings.

All the settings are using the same method. First you get the list of the settings where you can **Add**, **Edit** or **Delete**.

To add a new setting, press the **Add** button. For editing the data, select the line you wish to **edit**. Fill in the required data and press the **save** command. You will get a confirmation. If the data is not consistent, the system will generate error messages. To delete an entry, select in the row and press the **Delete** command. It will not be possible to delete an entry if it is related to other data in the system.

You can print the list of the settings by using the printer.

Add Phase

Name *

☒ Active ☐ Inactive

Close Save

Location

The settings for administration of the location include:

- **County**
- **Parish**
- **City**

Client

The settings for administration of the clients include:

- **Step**: is the step where the client is in the process
- **Consultant**: Is the consultant in charge of the client
- **Type of support**: Support given after an inquiry
- **Type of inquiry**: Kind of inquiry. This will serve to build a knowledge basis.

Intervention

The settings for administration of the interventions include:

- **Target**: Is the target of the intervention
- **Status**: In which status is the intervention
- **Phase**: At what phase is the intervention

User

When you click User, you get the list of users.

The screenshot shows a web interface for user management. At the top, there's a header with the title 'User' and a breadcrumb 'Home > User'. Below the header is an orange 'Add User' button. The main area contains a table with columns: Username, Email, Name, Phone, Profile, Language, and Action. The first row shows a user named 'admin' with email 'admin@hotmail.com' and profile 'superadmin'. The 'Action' column has icons for edit and delete. Above the table, there's a 'Show 10 entries' dropdown and a search bar.

To add a new User, press the **Add User** button. For editing a User, select the line you wish to **edit**.

A user will be given a Profile. It's the profile that will give the access granted to each user. The language preference should be indicated. The system will open in the language given to the user.

Fill in the required data and press the **save** command. You will get a confirmation. If the data is not consistent, the system will generate error messages. To delete a User, select the entry in the row and press the **Delete** command.

The 'Add User' form is a modal window with the following fields: Profile (dropdown menu), Username (required), Name (required), Password (required), Confirm Password (required), Email (required), Phone, Gender (radio buttons for Male and Female), and Language (radio buttons for English and French). There are 'Close' and 'Save' buttons at the bottom right.

Profile

The profile will give the access to different parts of the system. You can create as much profile needed to ensure that the system is safely used.

Date From and **Date To** will determine if the post will be presented or not in the News page.

Active or **Inactive** will get the same reaction.

Finally, in the **Document** tab you will be able to upload different documents for the post.

Reportico

Reportico is a flexible web reporting tool that can report on data from a variety of tables. A browser-driven front end allows the creation, maintenance and execution of reports. This software is complex and will be a future training for the county. The advantages is that users can developed their own reports without the help of programmers.

Some knowledge on the definition of the database should be acquired first. The user of Reportico must also know how to generate query with MySQL. You can have more details on www.reportico.org

Reportico Administration Page

Select a report suite from the dropdown below or enter the Reportico Administrator Password to start designing Reportico reports.

Enter Design Mode

Run Project Report Suite:

Documentation

In the documentation menu, you will get documentation on the system. You can download or print the user guide.
